New Kino Flo/BlockBattery

Burbank, CA – Kino Flo Lighting Systems partners with BlockBattery for newly introduced **KF21** (NiMH) battery systems for its LED line. The Battery System is designed for our LED products with DC capability:

- Celeb 250 LED DMX
- Diva-Lite 20 & 30 DMX
- FreeStyle 31 & 21 LED DMX
- Select 30 & 20 LED DMX

The **KF21** battery can power 28.8V (20-34VDC) applications. Run time for Kino Flo products listed above is approximately 1 hour and 10 minutes at full brightness. When fixtures are dimmed, the battery will last longer.

Charge time is only 1.5 hours versus Lithium batteries that take approximately 4 hours to fully charge. Unlike lithium batteries, the Kino Flo/BlockBattery is also travel friendly with no travel restrictions. In addition to powering 28.8V, battery adapters may be used to access 14.4V to be used with products with 14.4V input. It's like having two batteries for the price of one!

The Battery system includes a charger, universal power supply and Mafer Mount with 28.8V output with 3-Pin xlr. A Baby Mount with 28.8V output with 3-Pin xlr is available as an option.

The Kino Flo/BlockBattery will be available as a one battery or two battery system and will be available August 2017.
