Tegra 455 DMX Kits

KIT-T455-120U
Tegra 455 DMX Kit, Univ 120U

KIT-T455-230U
Tegra 455 DMX Kit, Univ 230U

Kit Contents:
1 Tegra 455 DMX
1 Flozier, Half
1 Lamp Case
1 Ship Case

Dimensions:  Weight:  
54.5 x 9 x 21”  41 lb
(138.5 x 23 x 53.5cm)  (19kg)

KIT-T455B-120U
Tegra 455 DMX Kit w/ Soft Case, Univ 120U

KIT-T455B-230U
Tegra 455 DMX Kit w/ Soft Case, Univ 230U

Kit Contents:
1 Tegra 455 DMX
1 Flozier, Half
1 Lamp Case
1 Soft Case

Dimensions:  Weight:  
55 x 8 x 19.5”  23 lb
(140 x 20.5 x 49.5cm)  (10.5kg)
The Harness wiring is color-coded. The same color-code must match at each end of the lamp for proper operation.

### Inserting Lamps

**Locking Lamp Connector:**
Depress both tabs on lamp connector and apply to lamp pins. Match the Harness color-codes at each end of the lamp.

Push lamps into the fixture’s Lamp Holder Clips.

### Applying Louver

The Louver is fastened to the reflector with 4 Velcro straps.
Mounting Procedures

The Center Mount has a ball and socket design with a lockdown knob. To orient the fixture, loosen knob position the fixture, then lock down the knob.

Lollipops are interchangeable.

**MTP-L**  Kino 41 Lollipop w/ 3/8” Pin (10mm)
**MTP-LBC**  Kino 41 Lollipop w/ Baby Receiver Curve (16mm)
**MTP-LBS**  Kino 41 Lollipop w/ Baby Receiver Short (16mm)

Baby Offset Arm

The Baby Offset Arm (**MTP-B41F**) allows fixtures to mount on the center of a stand or can also be under slung from a baby stand to use as an up light.
Mounting Flozier

Remove Louver. Stretch two elastic cords around fixture. Take up slack on both elastic cords.

Expand the Barndoors to smooth out the face of the Flozier and eliminate wrinkles.

Gelling the Fixture

Restricting the airflow around the lamps can cause the lamps to operate hotter. This increased heat will raise the lamp’s color temperature and green spike.

Therefore, it is recommended to clip gels to the doors of the fixture.

Do Not clip gels to louver. Do Not block the fixture ends in a manner that restricts airflow.
Ballast Power

Warning! To Ensure Proper Operation

ALWAYS TURN OFF THE FIXTURE BEFORE connecting or disconnecting lamps. After the lamps are properly installed, the in-line switch can turn on the ballast.

The Tegra 455 DMX requires 100-240VAC 50/60 Hertz on an earth grounded circuit. The electronic Ballast operates at a high frequency of 40kHz. It is lightweight, flicker-free and dead quiet.

Cold Temperature Operation

The Tegra 455 DMX is designed to operate at temperatures from 14°F to 122°F (-10°C to +50°C). In cold temperatures, the ballast may not strike the lamp(s). Switch the ballast to OFF. Make sure onboard dimmer is full up and re-strike.
Tegra 455 DMX Control Panel

A) DMX Channels: Sets the fixture to use 1 DMX channel to dim all 4 lamps or 4 DMX channels to control lamps individually.

B) DMX OK: Lights if valid DMX signal is present.

C) DMX Address: Sets DMX address of fixture.

D) DMX-In & DMX-Out: DMX-In receives signals from Dimmer Board. DMX-Out relays DMX signals through other fixtures or instruments. (Note: Each Tegra 455 DMX fixture has an “AUTO TERMINATE” feature. The last fixture that does not have an XLR cable attached to the DMX “Out” port will automatically terminate.)

E) Fuse: Provides circuit protection. Note: If fuse is “blown” or “open”, replace with same type of fuse rating as marked.

F) Dimmer Knob: Manual dimming control

G) Remote Dim: Input jack for Remote Dimmer (DIM-5)

H) Lamp Switches: Turns individual lamps on manually.
Manual Operation

### Manual Dimming Control

The onboard dimmer dial can manually dim lamps.

### Lamp Switching

The Tegra 455 DMX fixture has four lamp switches which allow for individual lamp operation. See diagram below.

Turning off 2 lamps equals a one f-stop reduction in light output without color shift.

### Tegra 455 Lamp Switching

<p>| | | | |</p>

<td>White</td>
<td>White</td>
<td>Black</td>
</tr>
</tbody>
</table>

**Note**: All manual controls are disabled as soon as the DMX cable is applied. For Manual control with DMX cables plugged in, set address to “000”. There is a 5 second delay when switching between DMX and Manual control.

### Dimming and Color Temperature Shift

Dimming can be used to adjust the light output of the fixture. The color temperature will shift marginally if kept to within one f-stop. Dimming beyond one f-stop may result in a reduction of color temperature as well as a noticeable shift to magenta.
Remote Dimmer Operation

The Remote Dimmer (DIM-5), sold separately, is designed to remotely dim the Tegra 455.

Insert the dimmer cable into the receptacle marked: REMOTE DIM.

Inserting the dimmer cable will automatically disable the onboard dimmer.

Insert the other end of the dimmer cable into the Remote Dimmer (DIM-5).

DMX Operation

DMX Addressing

Prior to hanging any instruments, set the DMX address of each fixture.

Push the tabs above or below the number window to set the address. (Valid addresses range from 001 to 512.) The light above the address block will illuminate if a DMX signal is present.

Tip: Power is not required to set DMX addresses. Therefore, DMX addresses can be set for each fixture prior to hanging.

IMPORTANT!
The dimmer board/light console should have its channel set to LINEAR light output response. (LINEAR response is the default setting on most dimmer boards.)
If a fixture loses its DMX signal, it will hold its last DMX command. For this reason, it is important to turn a fixture off using the DMX commands. For example, if you try to turn off the lights by turning off the dimmer board, the lights will remember their last DMX command and stay on. The fixtures require a DMX “Off” or “Black-Out” command in order to turn off.

Note: The Tegra ballast board incorporates a preheat circuit when striking the lamps. Therefore, when fading up from black, there will be a 2-3 second response delay. One way to avoid this issue is to lower the light level to approximately 7-10% on the DMX console, then fade up from that point.

**DMX Channels**

The **Tegra 455 DMX** operates on 1 or 4 DMX addresses. On **DMX Channel 1**, one DMX address controls/dims all 4 lamps on one dimmer channel. On **DMX Channel 4**, four DMX addresses control/dim 4 lamps individually.

Auto Terminate Feature

The Tegra 455 DMX series have an “AUTO TERMINATE” feature. The last fixture that does not have an XLR cable attached to the DMX “Out” port will automatically terminate.

Any theatrical lighting board with DMX512 protocol can be used to individually turn on/off lamps in a fixture. Tegra 455 DMX fixtures can be jumpered using the IN and OUT ports. As many as 100 fixtures can be jumpered on one chain as long as the DMX cable run remains under 1000 feet or 40 x 25ft DMX cables.

Note: When operating fixtures at great distances from the dimmer board, it is recommended to use Opto-Isolators to provide DMX signal amplification.

DMX Cables

Cable must comply with EIA-485 (RS485).

The fixture uses five-pin XLR male and female connectors to receive DMX signals from the Dimmer Board and jumper the fixtures in a series. DMX pin-out wiring follows the USITT DMX512 standard:

Pin 1: Shield
Pin 2: Data –
Pin 3: Data +
Pin 4: Spare –
Pin 5: Spare +

Note: Pin four and five in the Fixture are connected internally as Pin four to four and Pin five to five. Connecting Pin four and five as the pass-thru allows secondary data to be passed through other equipment.
**Do not use Microphone Cables** and other general purpose, two-core cables designed for audio or signaling use. They are not suitable for DMX512. Problems due to incorrect cabling may not be immediately apparent. Microphone Cables may appear to work fine, but systems built with such cables may fail or be prone to random errors. Cable must comply with EIA-485 (RS485).

---

**Troubleshooting**

If the Fixture does not strike after two or three attempts, turn off the Fixture.

- With the power switch in the ON position, the red light should be on. If it is not, Voltage is not present. Check your power feed.
- The onboard dimmer should be full up, turned completely clockwise.
- All four lamp switches should be in the ON position.
- Check lamp contact. Harness color-codes must match at each end of the lamp. Once everything has been checked, re-strike.

With DMX cable connected, if yellow light is off, there is no DMX signal.

- Establish a valid DMX signal. Address must be between 001 and 512. (Note: 0 or 513 and higher are invalid addresses.)
- The dimmer setting on the lighting board must be up in the full mode.

There is a 2-3 second response delay when fading up from black.

- Lower the light level to approximately 7-10% on the DMX console, then fade up from that point.

## Fixture Specifications

### TEG-455-120U  Tegra 455 DMX, Univ 120U

- **Input Voltage:** 100~240VAC 50/60Hz
- **Output Frequency:** 40kHz
- **Amperage:** 2.8 amps at 120VAC
- **Lamp Switching:** 1~4
- **Dimming Range:** 100% - 5%
- **Weight w/ lamps:** 19 lb (8.6kg)
- **Dimensions:** 52 x 13.5 x 6”
  - (w/ 6.5” barndoors)
  - (132 x 34 x 15cm)
  - (w/ 16.5cm barndoors)
- **Lamp Type:** F75/T12

### TEG-455-230U  Tegra 455 DMX, Univ 230U

- **Input Voltage:** 240~100VAC 50/60Hz
- **Output Frequency:** 40kHz
- **Amperage:** 1.4 amps at 230VAC
- **Lamp Switching:** 1~4
- **Dimming Range:** 100% - 5%
- **Weight w/ lamps:** 19 lb (8.6kg)
- **Dimensions:** 52 x 13.5 x 6”
  - (w/ 6.5” barndoors)
  - (132 x 34 x 15cm)
  - (w/ 16.5cm barndoors)
- **Lamp Type:** F75/T12
