(57 x 34.5 x 85cm)

Weight: 55 lb
(25kg)

Diva-Lite 201 Kit
(2-Unit)
**Inserting/ Removing Lamps**

To insert, position lamp over lamp holder.

Press lamp base down until it clicks into place.

Press lamp end into lamp clip.

To remove, press red locking tab down and pull up on lamp.

Pull lamp out of lamp clip.

**Warning!**

Do Not lubricate the sliding lock mechanism on the lamp holder.

---

**Applying Gel Frame and Louver**

The Gel Frame is held to the fixture with 4 Velcro straps.

The Louver is fastened to the fixture with 4 Velcro straps.
Mounting Procedures

Mounted on a baby stand.

 Mounted to pipe grid.

Note: When hanging in a studio, loop a safety cord through the metal ring provided on the back of the fixture.

A 180 degree turn loosens the orientation of the mount. A right turn tightens the mount.

The tension on the lock lever may be adjusted by pulling the handle away from the mount. This disengages the handle from the screw mechanism and allows the lever to be reoriented.

You can also use a screwdriver to adjust the tension. Pull back on handle and adjust screw.

Baby Offset Arm

MTP-B41F
Kino Offset w/ Baby Receiver (16mm)

The Baby Offset Arm (MTP-B41F) allows fixtures to mount on the center of a stand or it can also be under slung from a baby stand to use as an up light.
Mounting Flozier

Remove Louver.

Stretch two elastic cords around fixture.

Take up slack on both elastic cords.

Expand the Barndoors to smooth out the face of the Flozier and eliminate wrinkles.

Applying Gel to Gel Frame

Rotate all Velcro tabs to the inside of frame. Apply double sided transfer tape to one side of the gel frame.

Lay the taped side down on the gel and press firmly for adhesive to adhere.

Trim the excess gel from the frame. Rotate Velcro tabs back into position.
Correct Lamp Orientation

VERTICAL MODE:
Follow the principle of lamp base up and lamp tip down. This orientation keeps the mercury away from the cathodes and provides best color temperature stability and best color rendering.

DO NOT operate fixture with lamp base in the down position. Color can diverge up to 400K and will get very green.

HORIZONTAL MODE:
Even in the horizontal position, a slight rotation favoring the lamp tips (lamp base higher than the lamp tip) will allow for better color temperature stability.
Ballast Power

Warning! To Ensure Proper Operation

ALWAYS TURN OFF THE FIXTURE BEFORE connecting or disconnecting lamps. After the lamps are properly installed, the in-line switch can turn on the ballast. Avoid operating in temperatures above 140°F (60°C) or below 14°F (-10°C).

Cold Temperature Operation

In temperatures below 14°F (-10°C), the ballast may take longer to strike. If lamps do not strike within 5 seconds, switch the ballast to OFF and try again. Check that the lamps are properly seated, set dimmer to Full and restrike. If temperatures are too low, try to warm up the fixture to at least 14°F (-10°C). Lamps will turn on at preset dimmer settings as long as the temperature is above 14°F (-10°C).

Troubleshooting

LAMPS FAIL TO LIGHT:

• Check ambient temperature. The unit may have trouble starting if operating in temperatures above 140°F (60°C) or below 14°F (-10°C).
• With the power switch in the ON position, the red light should be on. If it is not, voltage is not present. Check your power feed.
• The onboard dimmer should be full up (turned completely clockwise).
• Check lamp contact. Lamps must be properly seated. If one lamp is not making contact or is burned out, two lamps will be off.
• Replace lamp or lamps.
• After having checked that lamps are correctly seated, turn off power to the fixture for 10 seconds and restart.
• Check that the lamp selector switch is in the appropriate setting.
Diva 415 Lamp Select Switch

The Diva-Lite 415 Universal Lamp Select Switch allows for 4 Lamp or 2 Lamp operation.

Turning off 2 lamps equals a one f-stop reduction in light output without color shift. In the 4 Lamp position all lamps are on. In the 2 Lamp position only the two center lamps are on.

Note: This feature is not available for the Diva-Lite 201.

Dimming Control

MANUAL DIMMING CONTROL

The Dimmer should be full up when striking the lamps. Once the lamps have come up to full temperature, in about 3-5 minutes, then dim to the desired light level.

For full light output, turn dimmer fully clockwise.

An input jack for an optional Remote Dimmer (DIM-5) is located next to the Dimmer.

Dimming and Color Temperature Shift

Dimming can be used to adjust the light output of the fixture. The color temperature will shift marginally if kept to within one f-stop. Dimming beyond one f-stop may result in a reduction of color temperature as well as a noticeable shift to magenta.
Remote Dimmer Operation

The Diva-Lite Remote Dimmer (DIM-5) is designed to remotely dim the Diva-Lite fixture models which have the REMOTE DIM feature. A 15ft dimming cable is supplied with the Dimmer.

Insert the dimmer cable into the receptacle marked REMOTE DIM.

Inserting the dimmer cable will automatically disable the onboard dimmer.

Insert the other end of the dimmer cable into the Diva-Lite Remote Dimmer (DIM-5).
