

Old Hinge and Silver Conduit Removal:

Unscrew the set screws from each end and pull out the damaged hinge wire and silver conduit. Save the set screws for re-installation.

New Silver Conduit and Hinge Wire Installation

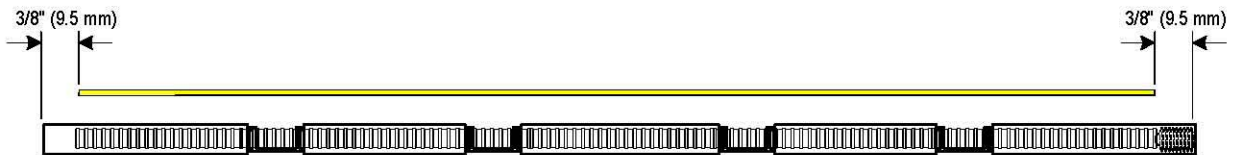

- 1) Install the set screw into one end of the fixture and tighten until flush with fixture.

- 2) Flatten fixture. Insert the precut Silver Conduit until it reaches the set screw.

- 3) Cut the new Hinge Wire (EXP-FXRS) $\frac{3}{4}$ " (19MM) shorter than the total length of the fixture.

- 4) Insert the Hinge Wire through the Silver Conduit until it reaches the set screw.

Note: **Do Not** flex the fixture until the Hinge Wire is completely installed!

- 5) Install a set screw at opposite end to secure the Hinge Wire and Silver Conduit.
